

AURA ISS Environmental, health & Safety policy

AURA ISS provides a safe, healthful, and secure workplace for all of its employees. Our employees and the environment in which we work are important factors in the success of our business. We design, manufacture, and sell safety products to protect life and property. In this spirit, it is especially important that:

- We utilise safe work practices ourselves.
- We have safety and health programs that focus on preventing work-related accidents and injuries.
- We control health hazard exposures, and to minimise the impact on environment of our activity, it is vitally important that AURA personnel recognise that safety is a corporate priority of the highest order.
- We offer environment friendly products and solutions.
- We give due consideration to the environment in getting up our operations and manufacturing strategies.

To support this policy, the following objectives have been built into AURA's environmental, Health and Safety Program:

- Environmental, health and safety activities will be built into AURA's business planning, operating, and reporting procedures.
- All employees will be actively involved.
- Continuous improvement in all areas of environmental, health and safety is the guiding principle for future program development;
- AURA ISS will be using a safety management system that is in line with the essential requirement of international codes as ISO 14001 an OSHAS 18001;

Jordi Rovira

Managing Director
AURA Industrial Safety Systems
